SUMMARY

Self-motivated developer with a passion for backend systems and full-stack applications. Hands-on experience in Java, .NET, C++, and SQL with a focus on REST APIs, database design, and clean architecture. Strong problem-solving mindset with an eagerness to deliver innovative, scalable solutions in software engineering roles.

TECHNICAL SKILLS

- **Programming:** Java & OOP, J2EE, C/C++, SQL and Relational Databases, Web Technologies, .NET, Spring Boot, Express.js (learning), familiar with C# basics to API's and currently learning ASP.NET
 - **Practices:** OOP's, Clean Code, Debugging, Java (JDBC, RESTful APIs and Web Services, DI, IOC, Beans, AOP, Logging and Exception Handling, Multithreading and Concurrency), Agile and Scrum Development Env., Kanban
 - **Other:** Networking Concepts, Git, GitHub, Docker, Kubernetes, Jenkins (learning), Jira, BitBucket, Agentic AI, AI Tools, Consistency, Team Management, Leadership, Passionate for Learning new things
 - **Tools:** Eclipse, IntelliJ IDEA, NetBeans, MS Visual Studio (C++/C#)
-

PROJECTS

AWS Cost Optimization Platform | Java, C# .NET | Dec 2025 – Jan 2026

- Developed a project as a polyglot microservices-based Cloud Cost Management & Optimization System designed to monitor AWS Free Tier usage using a modern tech stack. We developed a React 18 frontend with Tailwind CSS and Shadcn/UI for a responsive dashboard, integrated with two distinct backends: a Java Spring Boot service for JWT-based authentication and Google Gemini 1.5 Flash AI integration, and a C# .NET 8 service for real-time AWS SDK tracking of EC2 resources. The architecture leverages MySQL for persistent storage and ensures secure, seamless interoperability between services via shared JWT logic and CORS. Key features include an AI-driven cost assistant for optimization insights and a unified health monitoring system, showcasing expertise in full-stack development and AI integration.

TCP Chat Application using C++ and Winsock | C++, WinSock, Multithreading | Sep 2025

- Built a multithreaded TCP chat application in C++ using Winsock APIs.
- Implemented concurrent client handling using thread.
- Developed a server capable of accepting and broadcasting messages between multiple clients in real time.
- Used socket programming concepts including bind, listen, accept, connect, send, and recv.
- Designed separate sender and receiver threads for full-duplex client communication.

Vehicular Tracking System using Geospatial Data | Flutter, Supabase, QGIS | Jan 2025 – Apr 2025

- Developed a real-time school bus tracking app with QR-based attendance and role-based access (parent/driver/admin). Integrated Supabase for backend, authentication, and live location updates with offline caching support.
 - Processed geospatial data using QGIS to improve route accuracy by 30%.
-

EDUCATION

- **PG-DAC (Post Graduate Diploma in Advanced Computing)**
CDAC-ACTS, Pune | Aug 2025 – Feb 2026 | Grade: A | Percentage: 77.50%
- **BE in Artificial Intelligence & Data Science**
Konkan Gyanpeeth College of Engineering | 2022 – 2025 | CGPA: 7.9/10 | Percentage: 69.93%

- **Diploma in Computer Engineering** | 2020 – 2022 | Percentage: 85.60%
 - **Higher Secondary Education** | 2018 – 2020 | Percentage: 68.31%
-

INTERNSHIP

Data Science & Business Analytics Trainee, InternsElite | Jun 2024 – Aug 2024

- Assisted in data cleaning and visualization using Python (Pandas, Matplotlib).
-

CERTIFICATIONS

- STTP on Geospatial Computing and Applications | Jan 2025
- ChatGPT & AI Tools Workshop | SkillNation | Sep 2023
- Java Certification | Simplilearn | Feb 2022
